

15 – 21 February 2022

Director General's Office

The *icipe* Director General, Dr Segenet Kelemu, recently met Centre for Agriculture and Bioscience International (CABI) Chief Executive Officer, Dr Daniel Elger, and Director General-Development, Dr Dennis Rang, to deliberate on strategies to expand bilateral collaboration between the two organisations.

Insects for Food, Feed and Other Uses Programme

icipe has contributed to the setting up of numerous insect farms in Kenya and other parts of Africa, with the goal of developing new protein sources that will enable the world to feed billions of people on a planet whose natural resources are under severe pressure.

Bee research

icipe and International Fund for Agricultural Development (IFAD) are conducting a project to help develop and increase the honey trade in the island nations of Mauritius, Seychelles, Comoros, Madagascar and Zanzibar. The project aims to increase food security and generate more income opportunities for smallholder farmers.

Malaria research

The identification of a malaria transmission-blocking microbe in mosquitoes marked an important stride in the fight against the disease. The study led by researchers from *icipe* and the University of Glasgow provided hope for a natural method of malaria control.
