icipe researchers wins a grant from the Kenya Education Network (KENET)

Kennedy Senagi and James Egonyu won a small grant to demonstrate how machine learning using the sounds of crickets can be used to develop a system to understand different events (feeding, mating, aggression etc) to inform their optimal production. The grants are intended to catalyse research in emerging priority research areas, as well as to promote collaboration and the development of early career scientists.

@DH_PlantVillage

nematodes are to my mind, the biggest biotic threat to crops in Africa. Woefully understudied and we proud to partner with @icipe @IITA_CGIAR and @moiuiversitycu

PlantVillage @plantvillage · Sep 15
Scientists Dany Coyne, Njira Pili and Calvin Orage talk about nematodes as the main challenge in potato farming and how his team, in collaboration with Dream Team Kenya, is working on ways of controlling the pests.

Congratulations @icipe this is a giant step in combating African Animal Trypanosomosis. Very exciting news indeed!

icipe @icipe · Sep 19
@icipe's novel #research has uncovered a simple non-invasive, rapid, & affordable method of diagnosing the African #animal #trypanosomosis. Find out more about this fantastic discovery on below podcast: youtube.com/watch?v=OSxwnR...
