## Achievements of More Young Entrepreneurs in Silk and Honey (MOYESH) project

The MOYESH project serves as a model for holistic, inclusive development and circular economies through beekeeping and sericulture farming. The project has exceeded its targets on many levels in the three years since its inception due to several factors including the alignment with national and regional development agendas.

## The TSARA initiative moves into action

*icipe* is part of the TSARA (Transforming Food and Agricultural Systems through Research in Partnership with Africa) Initiative which seeks to strengthen collaboration to promote sustainable agriculture, food systems, and agricultural, pastoral, and forestry landscapes. The foundation for its implementation was laid in the first general assembly meeting, recently held in Cape Town, South Africa.

## Creating opportunities for entrepreneurship

Here are illustrations of how the MOYESH project is transforming businesses, creating more jobs, and improving people's lives in Ethiopia.

## Enabling more women in Ethiopia to enter and thrive in beekeeping

Historically, beekeeping was not a female occupation in Ethiopia and cultural perceptions made it difficult for women to find gainful employment, consigning them to traditional domestic roles. This case story demonstrates how the MOYESH project is reversing this trend using different strategies including the creation of women-led beekeeping enterprises.

Scientific Farmer  
@scifaama

Maybe it's time to adopt and scale up interventions from @icipe like the push-pull, various biopesticides and other organic interventions. Will they sustain large scale farming?, Let the professionals convince us.

**Farmers #Trend** @FarmersTrend · Dec 7

The Kenyan farming community is divided over efforts by lawmakers to bring their regulations on pesticides in line with the EU's green deal. Industry groups warn that a ban could wipe out over €1 billion of production.
